About This Software

RPG in a Box is a powerful, easy-to-use, and fun-to-use RPG creation tool. It will contain every tool necessary for turning your ideas into games, all packaged together "in a box". The software is designed with a beginner-friendly approach as to not require any programming or modelling knowledge while still providing a wide range of customization and openness.

Please be aware that **RPG in a Box** is still in alpha and many of the planned features are yet to be implemented! Before purchasing Early Access, please try out the free upcoming demo to get a feel for the current state of the engine.

Voxel Editor

Build tiles, objects, and characters from 3D pixel blocks (i.e. voxels) and easily animate them with the editor's frame-based/stop-motion animation system. Importing from MagicaVoxel (.vox) or PNG sprites is also supported.

Map Editor

Create grid-based worlds with the tiles you've built, then bring them to life by adding interactive NPCs and objects using the editor's intuitive navigation and interaction system.

Scripting

Set up and trigger in-game events with the visual, node-based script editor. Simply drag and drop the desired actions (no programming knowledge required), or manually code "quick scripts" using the custom, Lua-like scripting language.

Dialogue

Write conversations for your NPCs using a visual, flowchart approach similar to that of the script editor. Branching dialogue is supported via player choices and condition checking.

Camera System

Choose from three available camera types for your game: standard, first-person, and top-down. Stage dynamic cutscenes using the engine's flexible camera scripting system.

UI Customization

Design one or more dialogue box themes and customize the appearance of many other interface elements such as the inventory, main menu, and credits roll.

Basic Items

Define basic items for the player to find in containers or earn through the completion of tasks. Attach scripts to trigger effects for potions and other consumable items.

Sound FX Generator

Generate fun, retro-style sound effects using the built-in tool based on Dr. Petter's SFXR.
